Curt Wilkerson

Swartz Creek, MI

I was just getting ready to write an email to you to thank you for suggesting I attend the course. What a great weekend! I really learned a great deal about the equipment and woodworking. Mark designed the class project to really showcase the Felder machines. I think we got to see just about every operation most would do with the equipment including power feeders on the shaper. There were eight students and four instructors so it was very easy to get help and explanations about the machines. Mark demonstrated a lot of the accessories available which was very good as the pictures on the web can't really give an indication of the quality of the tooling. Clearly, Mark is a talented teacher and the explanations were clear and concise. I think a great deal of planning went into this class to allow us to do as much as we did in two days. I do wish I had taken the class before ordering as I am sure I would have spent more. Now I wish I had gotten the chuck on the jointer/planner as I now think the mortising attachment is very cool. I feel much better about my decision to get a slider
Best regards,
Curt
